STOP NEW DATA CENTERS!

Switzerland is currently experiencing a **massive expansion of its AI infrastructure**. Although Switzerland already has one of the highest densities of data centers in the world, 10 more are set to be built in the coming years. This is having **devastating effects** on the affected regions: Planned data centers, such as the one in the municipality of Beringen, Schaffhausen, consume **large amounts of electricity and drinking water**. Stop new data centers — short-circuit AI!

SOME FACTS ABOUT THE EXPANSION OF AI IN SWITZERLAND

Vast amounts of electricity and water are used in data centres, especially to cool the servers. AI therefore worsens the consequences of the **climate crisis**.

AI tools are being used for **surveillance, warfare, and genocide**. Fascist tech oligarchs like Elon Musk and Peter Thiel are using them to expand their power over the population.

To manufacture the high-performance chips required for AI applications, **rare raw materials** such as cobalt are mined under extremely harsh conditions, mostly in the Global South. This perpetuates **colonialism**.
